Introduction

SVK Coin is the world's best cryptocurrency that provides Decentralized and financial services to the SVK Community.

SVK Coin offers Decentralized services, Staking, Yield Farming, and virtual worlds experiences to its investors.

SVK Coin will Enter in Metaverse to provide users a virtual reality experience along with NFT services so that Invertors can earn and gain profit, reward and multiply their investment in a short period. SVK coin will provide a user-friendly ecosystem and a fully secured environment for its investors. SVK coin is the first and fastest platform that promotes global financial wellbeing by empowering the youth to be in control of their money and create their wealth opportunities.

Vision

SVK Coin had developed with the vision of the Creation of such an environment and ecosystem where Blockchain, Cryptocurrency, Decentralization, and Virtual World Experience will be available and known to every person and in each part of the world.

SVK coin will provide opportunities for wealth creation and continue developing it into a platform that will change people's lives forever. Our goal is to foster human connection through financial literacy filling this gap in the crypto and financial market and preparing the next generation of investors.

We have Transparency, Trust, Security, the three most important symbols of the success of any cryptocurrency that exists in the world. So join us in our mission to change the crypto world.

Characteristics

Trust : Any economic transactions and payment requires trust among the involved parties. Organization and individuals need the assurance that the transactions and payment they made should be completed and processed safely. We provide Safe and trusted ecosystem to our holders.

Transparency : Transparency is the most crucial point of discussion, SVK Coin will be transparent with the holders, Every step and decision will be informed and cleared to our Investors. We will provide users most transparent system.

- **Security** : SVK Coin offers their user the Most secured platforms and ecosystem so that users can connect with us without facing any difficulties with their security. We have developed the Contract after following all the safety measures which should be adopted. SVK provides the safest and secure environment to the investor. SVK Coin contract is audited by Enebula.

Limited Supply

SVK supply is less & fixed 20M coins, which makes it a secure investment coin as the price of coin will increase time by time because of low & limited supply of 20m coins.

we follow Demand and supply principle therefore we have a very limited and fixed supply

If supply remains the same and demand increases then price increases. Now, if the supply remains the same, but all of a sudden people are on a banana kick, it means prices will increase as more people are competing for a fixed number of bananas. If supply remains the same and demand decreases then price decreases.

One of the chief characteristics of Bitcoin is its limited supply. Other forms of money, including fiat currencies, can be printed at will by central banks—i.e., they have unlimited supply. There are only 21 million bitcoins that can be mined in total.

Other tokens, which have a constant flow of new assets added to the ecosystem, which makes them inflationary. Unlimited supply will act as a wall for it's price.

Where to buy SVK?

SVK provides decentralized ecosystem so we'll always recommend to use Decentralized Exchange like PancakeSwap.

PancakeSwap is a decentralized exchange built on Binance Smart Chain, a fast and inexpensive alternative to Ethereum. Much like the celebrated Uniswap DeFi AMM protocol running on Ethereum, PancakeSwap enables users to swap between cryptocurrency assets by tapping into user-generated liquidity pools

SVK will be LISTED on many Centralized-Exchanges.

PancakeSwap

How to buy SVK?

A QUICK GUIDE

- ❖ Create Account Create a TrustWallet or Metamask Wallet. That will allow you to buy, sell, send, and receive SVK.

- ❖ Send BNB Smart Chain to your wallet You can buy BNB Smart Chain (BNB) directly on MetaMask or transfer it to your MetaMask Wallet or TrustWallet from exchanges like Coinbase, Binance, etc. Make sure to use the BEP-20 network when transferring BNB.

- ❖ Connect your wallet to PancakeSwap Access your wallet to PancakeSwap by clicking 'Connect to a wallet' and selecting MetaMask.

- ❖ Swap BNB for SVK You can start swapping as soon as you have BNB available! Press 'Select a token' and enter the token address or search for it on the tokens list.

Staking

Staking can be a great way to use your crypto to generate passive income. When individuals stake their coins, they are essentially lending their coins to the network to validate transactions. In exchange for lending your coins and helping validate, the network rewards you with additional coins - effectively allowing you to earn interest.

Benefits of Staking Crypto

Here are the benefits of staking crypto:

- It's an easy way to earn interest on your cryptocurrency holdings.
- You don't need any equipment for crypto staking like you would for crypto mining.
- You're helping to maintain the security and efficiency of the blockchain.
- It's more environmentally friendly than crypto mining.

Risks of Staking Crypto

There are a few risks of staking crypto to know about:

- Crypto prices are volatile and can drop quickly. If your staked assets suffer a large price drop, that could outweigh any interest you earn on them.
- Staking can require that you lock up your coins for a minimum amount of time. During that period, you're unable to do anything with your staked assets, such as selling them.
- When you want to unstake your crypto, there may be an unstaking period of seven days or longer

Yield Farming

Yield farming was the hottest topic of the 2020 DeFi summer. In 2021, total value locked of liquidity pools continues to reach new high.

Yield farming is the practice of staking or lending crypto assets in order to generate high returns or rewards in the form of additional cryptocurrency.

Yield farming protocols incentivize liquidity providers (LP) to stake or lock up their crypto assets in a smart contract-based liquidity pool. These incentives can be a percentage of transaction fees, interest from lenders or a governance token (see liquidity mining below). These returns are expressed as an annual percentage yield (APY). As more investors add funds to the related liquidity pool, the value of the issued returns decrease accordingly.

What is APY in yield farming?

Yield farmers, and most protocols and platforms, calculate the estimated returns in terms of annual percentage yield (APY).

APY is the rate of return gained over the course of a year on a specific investment. Compounding interest, which is computed on a regular basis and applied to the amount, is factored into the APY.

Since the DeFi summer of 2020, yield farmers have been chasing eye-opening thousand percent APYs. However, these protocols and coins may be highly risky and susceptible to rug pulls.

Furthermore, the yield is earned in the form of protocol tokens, and is subject to highly volatile price swings.

We feel we've built an appealing seed protocol. However, Tezos's true potential lies in putting the stakeholders in charge of deciding on a protocol that they feel best serves them. Farming Protocols Yield farmers will often use a variety of different DeFi platforms to optimize the returns on their staked funds. These platforms offer variations of incentivized lending and borrowing from liquidity pools. Here are seven of the most popular yield farming protocols:

AAVE
COMPOUND
CURVE FINANCE
UNISWAP
INSTADAPP etc.

The Risks of Yield Farming Yield farming can be incredibly complex and carries significant financial risk for both borrowers and lenders. It is usually subject to high Ethereum gas fees, and only worthwhile if thousands of dollars are provided as capital. Users also run further risks of impermanent loss and price slippage when markets are volatile. CoinMarketCap has a yield farming ranking page, which an impermanent loss calculator, to help you discover your risks — CoinMarketCap also has a page that tracks the prices of the leading yield farming tokens.

NFT

NFT stands for “Non-Fungible Token,” and it can technically contain anything digital, including drawings, animated GIFs, songs, or items in video games.

Non-fungible means it is individual. Non-fungible tokens or NFTs are cryptographic assets on blockchain with unique identification codes and metadata that distinguish them from each other. Unlike cryptocurrencies, they cannot be traded or exchanged at equivalency.

NFTs exist on a blockchain, which is a distributed public ledger that records transactions. You’re probably most familiar with blockchain as the underlying process that makes cryptocurrencies possible.

Specifically, NFTs are typically held on the Ethereum blockchain, although other blockchains support them as well.

An NFT is created, or “minted” from digital objects that represent both tangible and intangible items, including:

Art
GIFs
Videos and sports highlights
Collectibles
Virtual avatars and video game skins
Designer sneakers
Music SVK coin’s

NFTs will be launched

ROAD MAP

November

Project ideology created and it's implementation started

December

SVK will be listed on pancakeswap, Hotbit, bitmart and other exchanges

January

SVK will be listed on CMC and Coingecko.

February

Gaming platform will be Launched SVK SWAP will be launched

March

Metaverse platform will be implemented. SVK coin's NFTs will be launched.

April

Staking & Farming services will be provided.

TOKENOMICS

Name : SVK Coin
Symbol : SVK

Contract Address

0x60605479dD9b018Bc28342B1B69c
DF5B0Ee5 ea62

Total Supply : 20000000

Token distribution

Marketing : 20%
Deployer : 25%
Rewards : 20%
Supply : 35%

CONCLUSION

This is the beginning of a new era for decentralized communities. When the time is right (because good things can't be rushed), SVK Swap will be the crucial point of contact between the decentralized world and global communities, allowing us to actualize our vision of widespread adoption of DeFi cryptocurrency.

SVK is spreading the awareness of Blockchain and CryptoCurrencies among people worldwide. SVK will provide Staking, Yield-Farming and other various earning opportunities for the SVK holders, and many use cases of our coin will be made in our own Decentralized-Swap.

We feel we've built an appealing seed protocol. However, SVK's true potential lies in putting the stakeholders in charge of deciding on a protocol that they feel best serves them.

SVK coin provides a Decentralised, Transparent, Trusted, Secure, virtualized ecosystem to the user so join us to use these services that we offer, we have the potential to change the existing cryptocurrency world.

DISCLAIMER

- Past performance is not necessarily indicative of future results. Past performance is no guarantee of future returns and there is no guarantee that the market price of coin will fully reflect their underlying net asset value.
- NO ADVICE: this Whitepaper does not constitute any investment advice, financial advice, trading advice or recommendation by SVK, its affiliates, or its respective officers, directors, managers, agents, advisors, or consultants on the merits of purchasing tokens nor should it be relied upon in connection with any other contract or purchasing decision. Nothing on the platforms of reddit, discord, telegram, twitter, this white paper or website is, or should be relied on as, a promise or representation in the future.
- SVK or any party associates makes no representation regarding the likelihood or probability that any actual or proposed account allocation will in fact achieve a particular investment outcome or goal. Please realize that cryptocurrencies have the value that individuals associate with it. Be wise in investing money into any digital currency. Prices fluctuate and tokens can be lost easily due to digital mishaps and other technical forms of theft even though security above all else is our top priority incidents may occur.
